SERIES "NT" FLEX-PAK® SOLID STATE PA AMPLIFIERS

Unmatched at any price, by any maker, these solid state Flex-Pak series "NT" packaged units are adaptable to a wide variety of applications once served only by custom-designed and custom-fabricated equipment.

Bogen Flex-Pak series "NT" packaged amplifiers will accommodate virtually any audio signal source and provide the flattest response with very low distortion.

Series "NT" Flex-Pak offers the largest combination of features and accessories; to mention a few, individual speech filters for each microphone, panel-calibrated notch filter, output limiting, microphone precedence, remote volume control.

Series "NT" — the "state-of-the-art" in packaged solid state P.A. amplifiers.

■ All-silicon transistors: designed for continuous operation at full output,—20° C. to +55°C. (131°F.); optimum performance assured at extreme temperatures. ■3mic. inputs (Hi-Z) convert to Lo-Z with plug-in transformers, 2 inputs convert to mag. phono/tape inputs. ■ PXA-2 panel-mounting preamplifier provides 2 additional Hi-Z mic. inputs (convertable to Lo-Z) with speech filters and optional remote control, mic. precedence. ■ Remote volume control of each mic. and aux. input with accessories LVP-1 and RVC-2. ■ Optional CMP-1 limiter (adjustable) provides relatively constant output level despite variations in input levels; reduces feedback.

MIXER-PREAMPLIFIERS

MXM-A

MXM-A MIXER-PREAMPLIFIER −20°C to +70°C (158°F).

Professional, broadcast quality, self-powered unit which accommodates 7 mixed input signals simultaneously (5 may be from high or low impedance mics.) One mic. input converts to an equalized mag. phono cartridge or tape playback head. Two aux. (high imped., high level) are connected to a fader control. Bridging input accepts signals from a remote preamplifier or a zero level line. Up to 3 MXM-A's may be paralleled to provide 21 inputs (up to 15 mics.). Output level may be monitored aurally and visually by headset and built-in VU meter. Panel-controlled speech filters for all mic. inputs; separate bass and treble tone controls. Provision for converting high imped. to balanced low imped. microphone inputs by using plug-in transformers. Sockets accept remote control and precedence plug-in units. Panel-controlled calibrated low frequency (notch) filter effectively "tunes out" hum, turntable rumble, etc. **Output:** 20 V. into high imped. load at 1%; 4 V. into 600 ohms at 1%; (from bridging output) 0.1 V. into 1 Meg. **Freq. Response:** 18-38,000 Hz ±1 db. **Output Imped.:** high imped. (less than 3,000 ohms); 500/600 ohms with TL 600 (broadcast quality) plug-in transformer. **Sensitivity:** high imped. 2 MV.; low imped. 0.1 V.; Mag., 1 MV.; bridging 0.5 V.; Aux., 0.1 V. **Hum:(below rated output)** Mic. 60 db. **Tone Controls:** treble: (10 KHz) +12 db to −12 db; bass: (50 Hz) +14 db to −8 db. **Tubes:** 4-12AX7A, 1-7247, 1-12AU7A plus 3 silicon rectifiers. **Power Consumption:** 47 watts, 117 VAC; 50/60 Hz. **Dimen.:** 16½"W, 12"D, 4¾"H. **Ship. MTM

MTM ALL-SILICON TRANSISTOR MIXER-PREAMPLIFIER ⊡ −20°C to +70°C (158°F)

Professional, all-silicon transistor, self-powered unit (operates from 120 VAC or 12-15 VDC). Mixes 6 input signals (4 may be low impedance microphones). Unbalanced low impedance microphone inputs convert to balanced (50-600 ohms) with T525U plug-in transformer — or convert to mag. phono/tape input with PMC-1 plug-in module. 2 aux. (high impedance, high level) are connected to a fader control. Up to 3 MTM's may be paralleled to provide 18 inputs. Output level may be monitored aurally (head set) and visually (built-in meter). Sockets accept individual remote control, precedence and compressor plug-in units. Speech filters in mic. channels 1 and 2. R.F. filters in all mic. channels. **Output:** at 0 db: 1.8 V. into 500 ohms (0.5%); at +12 db: 7 V. into 500 ohms (2.5%); output transformer is built-in; no high impedance output. **Freq. Response:** 40-15,000 Hz ±1½ db. **Output Imped.:** (split output) 125/150 ohms and 125/150 ohms or 500/600 ohms balanced. **Input Imped.:** Mic.: low imped. unbalanced (balanced with T525U transformer): Aux.: 0.2 Meg. **Sensitivity:** low imped. BOGEN SOUND SYSTEMS

BOOSTER AMPLIFIERS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools ... wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The Bogen models described below are ideal preamplifiers for these boosters.

The MO200A, MO100A, MT100 and NTB250 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources – any frequency or voltage within their power range – capable of driving servos, motors, vibration(shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC; NTB250 may be operated from a 24 VDC source. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs). No case is furnished with MO200A.

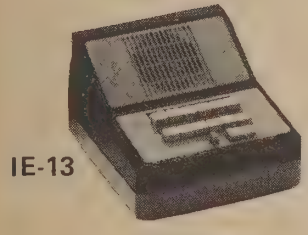
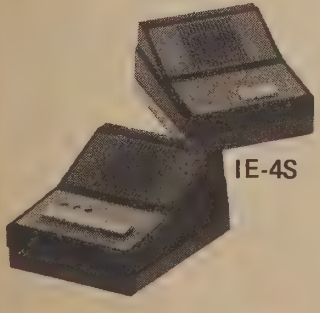
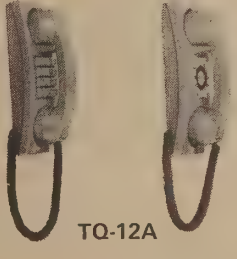
INTERCOMS



IM-17



IM-9



IE-7

IE-13

IE-4S

TSL-16 TQ-12A

Bogen intercoms include a wide variety of systems — each designed to answer a specific need.

SERIES IM INTERCOMS — One of the most versatile, powerful solid-state intercoms of its type — the Series IM is everything an intercom should be. And then some. At lower cost than a leased system. And without tying up valuable (and expensive) telephone lines and switchboard. You get instant high quality voice communication between office, stockroom, factory, loading dock. With no dialing, no buzzing, no waiting. Up to 17 stations, in any combination of masters and remotes you want. Master stations are completely private. That means you can't be eavesdropped on. But when you're called, you can switch to "hands-free" operation without the need to operate switches. Unlimited flexibility provides up to eight simultaneous private conversations in a seventeen station system. Remotes can be either — best for inter-office use — or non-private, so the shop foreman, for example, can answer you "hands-free" from anywhere in the area without interrupting his work. Up to six watts of peak output power from the master means he'll hear you — and vice versa — without the addition of an optional amplifier.

IM-9 MASTER STATION for systems up to 9 stations — all masters or one master and remotes or many masters and remotes. **Net Each: $109.45** (Zone 2: $110.05). **IM-17 MASTER STATION** for up to 17 stations. **Net Each: $133.45** (Zone 2: $134.15). **RIM-1 REMOTE** has a non-selective call-initiation switch (to one master), volume control, privacy switch. **Net Each: $19.20** (Zone 2: $19.45). **RIM-3 REMOTE** similar to RIM-1 but with selective call-initiation switch to three masters. **Net Each: $27.55** (Zone 2: $27.80). **TBS-45 OUTDOOR/INDOOR REMOTE** speaker functions as a remote in high noise level areas. With CS-1 or CS-3 switch, remote can initiate calls to one or three masters. **Net Each: $23.00** (Zone 2: $23.00). **WX-6 WALL MOUNTING REMOTE** for office, hall or shop. With CS-1 or CS-3 switch, remote can initiate call to either one or three masters. **Net Each: $10.23** (Zone 2: $10.47).

SERIES IE INTERCOMS — One of the hardest-working intercoms you'll find anywhere. With it you can choose an All-Master System that gives you single or conference-call communications with up to thirteen stations, anywhere in your company. In a thirteen station system, six simultaneous private conversations can be held. You can substitute one or two remotes in a stockroom or plant, so that personnel can answer "hands-free" without interrupting their work. You can even cut into your P.A. system for direct paging. And with the addition of our optional TBR-1 relay, the man you call can reply "hands-free" directly through the P.A. loudspeaker — as clearly as if he were in the same room.

IE-7 MASTER STATION for systems up to 7 stations — all masters or single master/multiple remote. **Net Each: $37.45** (Zone 2: $37.85). **IE-13 MASTER STATION** for up to 13 stations. **Net Each: $46.45** (Zone 2: $46.80). **RIE-1 REMOTE** has a non-selective call initiation switch to master. **Net Each: $11.95** (Zone 2: $12.20).

IE-4S ANNUNCIATOR INTERCOM SYSTEM — The most intercom for your dollar, if your requirements are limited to a few stations. Sophisticated, yet simple. Hard working, yet easy to operate. Functional, yet beautiful. The IE-4S may very well be all the intercom you need. One master and one remote station give you instant, direct and clear communication anywhere in the organization. Add a second or third remote, if your needs call for them. Call any or all remotes, just by pushing the appropriate buttons. For convenience, the remotes can be either private, which prevents eavesdropping, or non-private, for "hands-free" reply with no interruption of work. Unlike other intercoms in its class, calls from remote stations to the master are announced by a discreet beep, and a small annunciator shows which station is calling. If the master is unattended when the call comes in, the annunciator remains on, indicating at a glance who called. It's like having an electronic secretary. **Net Each: $44.95** (Zone 2: $45.50).

INTERNAL PHONE SYSTEMS — Extremely flexible telephone systems that provide simultaneous conversations without a costly central exchange. No switching, no dialing, no switchboard delay.

SERIES TSL — As many as eight separate conversations may take place at the same time in a 16-station system. Up to sixteen individuals can converse in a conference call. 100% trunkage is provided — stations can be used simultaneously without interference.

TSL-16 with 1 ring button and 15 station selector buttons. **Net Each: $48.25** (Zone 2: $48.60). **TSL-8** with 1 ring button and 7 station selector buttons. **Net Each: $40.75** (Zone 2: $41.10). **TRC** Phone Page Adapter allows paging from TSL phones. **Net Each: $31.65** (Zone 2: $31.90).

SERIES TQ — Up to 13 stations in a low-cost, fast operating system. Features selective ringing with common-talk line for single conversation or conference call, Series TQ Bogen-Phones are available in three models.

TQ-1A for 2 station systems. **Net Each: $43.75** (Zone 2: $44.40). **TQ-6A** phone for up to 7 station system. **Net Each: $29.05** (Zone 2: $29.40). **TQ-12A** phone for up to 13 station system. **Net Each: $32.65** (Zone 2: $33.00). **TRA** Phone Page Adapter allows paging from TQ phones. **Net Each: $31.65** (Zone 2: $31.90).

PRS-16 Power supply for TSL Phones. **Net Each: $41.55** (Zone 2: $42.00). **PRS-1A** Power supply for TQ Phones. **Net Each: $25.00** (Zone 2: $25.25).

RUGGEDLY BUILT, Newcomb RT and R model cases are ⅜" plywood that is crackproof and warp-proof and covered with heavy gauge, warm gray, washable vinyl. Corners are protected with metal. Come-apart hinges eliminate one of the most vulnerable parts of cabinet construction. Die-formed grilles of perforated metal protect speakers. Phonographs and players rest on spring-floated non-scratch feet to prevent needle skipping due to bumping. Turntables have rubber mats; new cast metal tone arms have finger lift; and an advanced pickup-and-stylus guard stops needle from hitting deck or being put down on wrong side of record. Cases are generously ventilated and provide easy access for servicing.

PORTABLE LOUDSPEAKERS

TR SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

NEWCOMB SUPER COLUMN, MODEL SCS-412

Here's the best column speaker you've ever heard. The Newcomb SCS-412 gives you super intelligibility, super efficiency, super power handling capacity. It contains four *twelve-inch* speakers specially developed for column use. Each amplifier watt is converted into more sound than is available from any other column. The SCS-412 makes small amplifiers sound like big ones. It will project your voice clear as crystal, syllable-perfect over the noisiest big crowd. It takes a man-size system to produce these results. The SCS-412 stands 56″ high, is 15″ wide, 7½″ deep, weighs 42½ pounds. Impedance is 8 ohms. It has a 25 foot cord, "Hideaway" cord compartment, series type jack with shorting switch. **PROFESSIONAL NET: $139.50**

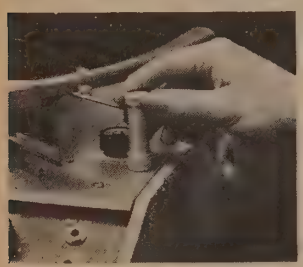
TR SERIES

Built with a great reserve of power for most uses – 40 watts peak per channel – the Newcomb TRS-1680 is perhaps the most complete and flexible portable sound system ever built. It reproduces stereo or mono with the turn of a knob. Stereo or mono tape or radio can be fed to the system. Live music and speech are reproduced either stereo- or monophonically.



TRS-1680 SERIES 80 WATT

It has three mike channels. The central mike puts the speaker or square dance caller in the middle, midway between the reproducers. There are separate treble, bass, and volume controls for phono or other reproduced sound. Each mike channel has its own, individual tone and volume controls. Mike tone controls are rotated for treble adjustment, pushed or pulled for bass. There is a blend control to provide any degree of stereo you wish. There are "Left" and "Right" inputs for radio, tape, or auxiliary; a scratch filter; "All" or "Phono" monitor jacks; jacks for two or four speakers with an impedance-matching switch. Turntable-amplifier unit DIMENSIONS: 9¼" x 17⅞" x 18⅝"; 43 lbs. POWER CONSUMPTION: 180 watts, 117 volts, 60 cycles a.c. A wide choice of reproducers to meet specific assignments is offered...

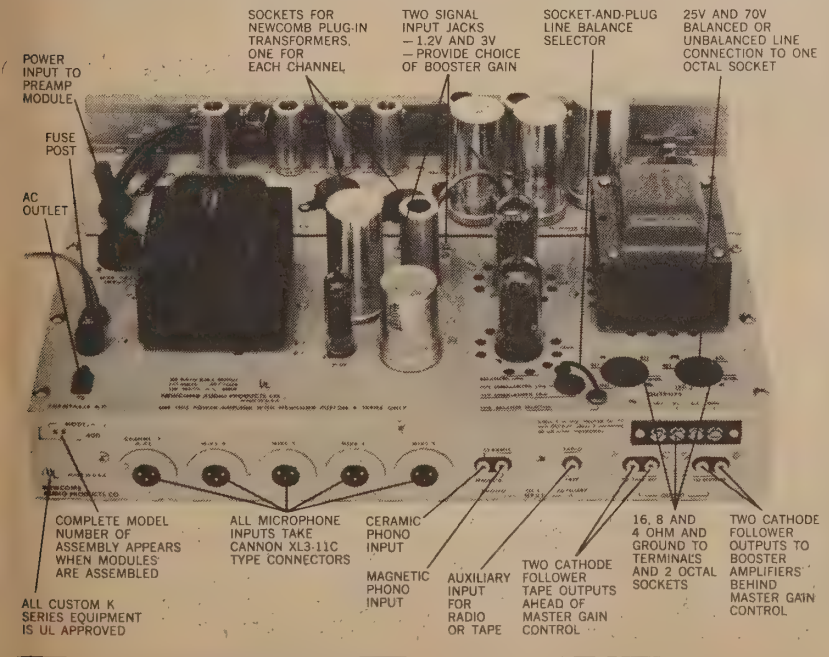
MODULAR PUBLIC ADDRESS AMPLIFIERS

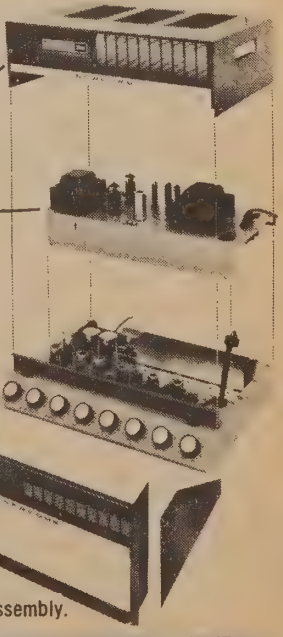
CUSTOM SERIES K

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY



Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address amplifiers weren't made this way to begin with.



All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than ½%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** −18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, −12 db at 20 cycles. **Treble tone control range:** −18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, −12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required** for 1 volt output from cathode followers: **Mikes,** .0028 volts, gain 54* db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. Equalized to full RIAA curve. **Ceramic pickup,** .086 volts. Equalized to RIAA curve. **Tuner or Tape input** (Aux.), .34 volts, ½ meg., gain 6.4* db. *Gain stated is with 1 meg. output load. With 600 ohm output using TR-100 add 13 db. **Hum** below 10 volts output (inputs shorted): **Mikes,** −80 db. **Magnetic pickup,** −70 db. **Aux. input,** −80 db. **All controls off,** −100 db. (It is never needed when a Model 400, 600, or 1250 power amplifier is used.) Model P includes a socket for a plug-in output transformer and output terminals for a balanced or unbalanced 600 ohm line. **Maximum 600 ohm output** = 0 VU. **Input power:** 117 volts, 60 cycles, 22 watts. **Wt.** 4½ lbs. **List:** (with tubes) $59.50

SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

THE ALL-TRANSISTOR TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" INTERCOMMUNICATION SYSTEMS

"Has Everything . . . Does Everything"

One Model Meets Every Requirement

Setting a high standard in quality, design and performance, the TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets the intercom needs of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

• **DISTINCTIVELY STYLED**—Less than 3-inches high. In cabinets that combine the look and feel of fine-grained leather with the strength and rigidity of steel. Attractively finished in charcoal gray and brushed chrome.

• **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). A Master can be "private" to one or more Masters and "non-private" to others, where Staffs need not originate calls to that Master. Staffs can originate only to "private" Masters.

• **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, voice follows.

• **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.

• **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.

• **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.

• **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.

• **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.

• **EXTERNAL RELAY CONTROL**—A standard feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. Use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth. Operates simultaneously with chime within Master.

• **RECIPROCAL POWER SUPPLY**—Each Master operates on 120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the "Chief" Masters in the system can operate without being plugged-in.

• **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.

• **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where high volume at Staff locations is needed. Ideal for paging speakers. K-HP-3 provides more than twice the volume of universal Staff; K-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.

• **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.

• **"LD" LONG DISTANCE**—(optional accessory on Masters). For use over cable lines of 2,000 ft., 5,000 ft., 10,000 ft. or more without loss of volume. Functions only between Masters with LD . . . not between an LD Master and Staff. Built-in at factory at additional cost.

• **CRADLE PHONE**—(optional accessory on Masters or Staffs). Has live microphone. Provides listening privacy and greater speaking convenience. Diminishes background noises in noisy areas. Eliminates use of controls in conversation between Masters. Cuts off incoming voice from loudspeaker when in use.

• **WALL MOUNTED CRADLE PHONE**—(optional accessory). For noisy areas and listening privacy. Use with K-HP-3, K-C-20 and K-S-101 or K-S-102. Speaker disconnects when in use.

• **RIGHT-OF-WAY RELAY**—(optional accessory). Use with "CHIEF REDI-POWER" Masters to page any group of stations with a single button. Paged stations can also be used for intercommunication. K-RW-10 capacity, 10 stations, K-RW-20 capacity, 20 stations. Connects to one Master, other Masters also utilize facilities.

• **POWER PAGING BOOSTER**—(optional accessory). Use with "CHIEF" Masters to page a group of speakers with a single button. 50 watts output. Requires its own paging speakers (as K-C-20, K-HP-3). Provides paging facility only . . . paged stations cannot reply or originate calls through paging speakers. Connects to one Master, other Masters can also utilize facilities.

To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For K-C-4920 and K-CRP-5920, use two lengths of 6226 Cable; and for K-C-4930 and K-CRP-5930 use three lengths of 6226 Cable, etc. To connect K-C-41, K-C-42 or K-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the K-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each K-C-41 or K-C-42, follow same procedure). Connect K-S-111 at any convenient point between remote speaker and Master Station.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 30 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add K-RW-10 or K-RW-20 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 120 volts, AC only. SOUND COLUMNS — Directional

- Uniform Sound Intensity
- High Efficiency
- Reverberation-free
- Weatherproof

Geloso Sound Columns feature in-line array of elliptical speakers contained in modern, handsomely styled acoustic weatherproof enclosures for indoor and outdoor use. This construction provides directional and controlled sound dispersion with concentration to the area served. Feedback "Howl" and Reverberation resulting when sound bounces from ceilings and wall surfaces are greatly reduced, thus permitting the use of greater amplification power. The Geloso sound columns are ideally suited for all sound applications, night clubs, auditoriums, churches, restaurants, etc. Each column is supplied with mounting brackets. Accessories are available to suit any application.

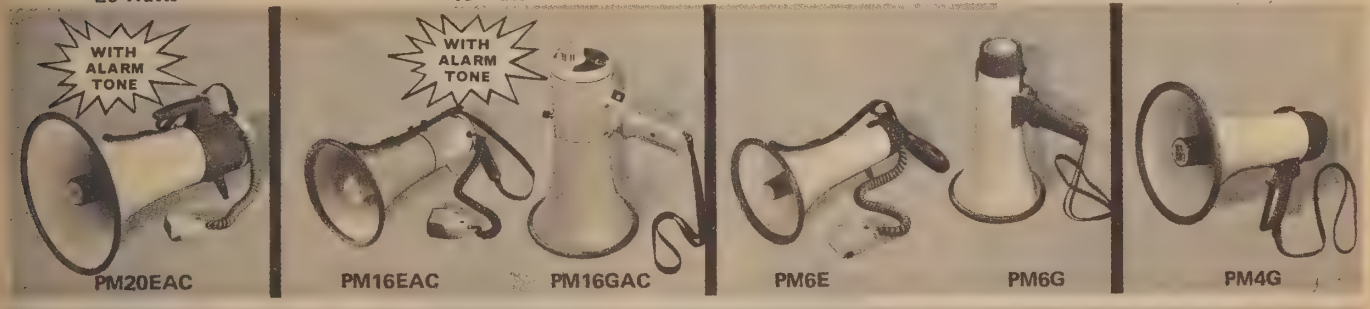
Transistorized POWER MEGAPHONES



New Electro-Voice Power Megaphones are extremely rugged, waterproof, weatherproof, and salt spray proof for the most severe uses: safety services, construction, sports, tour guides, marine, all emergency applications, etc.

All units include low-distortion, all-transistor amplifiers for high intelligibility and long term, trouble-free operation. Two styles are available: pistol-grip trigger with built-in microphone for instant readiness in any situation; and separate microphone with coil-cord for semi-permanent installation or for resting heavier models. Pistol grip models are well balanced for ease of holding and have volume control easily reached by thumb (except PM4G). Most models have noise cancelling microphone which reduces unwanted background sound and feedback for higher operating volume. All models have convenient carrying strap.

16 and 20 watt models incorporate an alarm tone signal, push-button operated, useful for attracting attention, as a distress signal, or boat fog horn. These models carry a bright International Yellow – recognized emergency color. When nickel-cadmium batteries are used in 16 and 20 watt models, they can be recharged without disassembly with the C1215 plug-in recharger listed below, for semi-permanent life.

All E-V Power Megaphones are protected from defect by warranty. Parts will be repaired or replaced within one year, and there is no charge for labor within 90 days of purchase. (Transportation prepaid to Electro-Voice or warranty station.) Parts and service are always available quickly.

MICROPHONES AND ACCESSORIES

POLYDIRECTIONAL RIBBON — 77DX

The quality microphone standard of the broadcast industry, the RCA 77DX, is available in two models: one with a low-gloss finish for TV, the other a satin chrome finish for AM and FM. The 77DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency-response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be ultilized. The 30- to 20,000-Hz frequency response of the 77DX makes it suitable for every high-fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30- or 150-ohm output impedance. This 77DX mounts on a standard ½-inch pipe thread, and comes with 30 feet of three-conductor shielded cable, less plug.

77DX Satin Chrome Finish **$224.00***
77DX-G Low Luster Gray Finish **199.00***

NONDIRECTIONAL DYNAMIC — BK-1A

Ideal for outdoor use or wherever constant handling is required, the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 Hz. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30- and 150-ohm connections are included. The BK-1A may be mounted on any type stand having ½-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three-conductor cable is supplied, less connector.

BK-1A **$95.00***

UNIAXIAL RIBBON — BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 Hz permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. It is supplied with thirty feet of three-conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has ⅛-inch pipe thread.

BK-5B **$172.00***

LAVALIER — BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3-ounce unit is only 2 9/16 by 15/16 inches. Wide-range frequency response (60-15,000 Hz) permits using the microphone for all speech applications. The 250-ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three-conductor shielded cable is supplied, less connector.

BK16B with lanyard and fastener **$95.00***

SUBMINIATURE LAVALIER — BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only ¾" x 1½". It has a wide-frequency response of 60 to 18,000 Hz, which has been tailored for proper speech balance. A line impedance voice coil permits use with 30- to 250-ohm unloaded inputs. The BK-12A is essentially nondirectional to 6,000 Hz, and as a result, ordinary errors in orientation have negligible effect upon response. It is supplied with lanyard, tie-clip holder, cable clip and 30 feet of two-conductor cable (less connector).

BK-12A **$99.00***

HIGH-OUTPUT UNIDIRECTIONAL RIBBON — KU-3A

The KU-3A is a high-quality microphone for TV, motion picture and recording studio line pickup or wherever boom operation is used. It provides uniform response from 30 to 15,000 Hz. Output impedance is factory connected for 250 ohms; however, it may be easily connected for a 30- or 150-ohm output impedance. It is supplied with voice/music switch, resilient mounting and 12 feet of pigtail cable, less connector.

KU-3A **$604.00***

With a frequency response from 100 Hz to 15000 Hz, the HK-103 has excellent off-axis rejection between 135° and 180°. Supplied with a special 5-pin rotatable connector which permits changing from low-to-high impedance. Also supplied with the microphone is a dual-thread (5/8"-27 thread and 5/16"-18 thread) microphone holder, a gold-and-black weighted metal desk stand, and an attache-type carrying case.

HK-103 ..... **$64.00***

OMNIDIRECTIONAL DYNAMIC — HK-105

General-purpose microphone for use in applications such as public-address and ungrading of home tape recorders. Frequency response from 70 Hz to 12000 Hz. Supplied with 10 feet of permanently attached cable, a desk stand and a lanyard. The HK-105 is housed in a die-cast metal case having a smart black-and-chrome finish.

Especially useful for general-purpose monaural and stereophonic high-fidelity home recording of voice, music or choral arrangements. Frequency response from 100 Hz to 13000 Hz. A special 5-pin connector supplied with the microphone permits switching from low- to high-impedance. Also supplied with a dual-thread (5/8"-27 thread and 5/16"-18 thread) adjustable microphone holder which makes the microphone suitable for use with a wide variety of microphone stands. Housed in a die-cast metal case and has an attractive satin-chrome finish.

The HK-107 has a switch for push-to-talk remote-control operation, and is housed in a high-impact black plastic case.

HK-107 ..... **$12.00***

DYNAMIC — HK-108

Especially designed for use in high-noise-level locations, the HK-108 is a unidirectional (cardioid), noise-cancelling microphone. This dual-cartridge, hand-held, microphone is intended for close-talk applications such as public address, paging, and mobile communications, and effectively reduces sound pickup from sources more than a few inches away. The HK-108 features a switch which can be used for push-to-talk remote-control operation, and is housed in a high-impact black plastic case.

HK-108 ..... **$17.00***

UNIDIRECTIONAL DYNAMIC — HK-102

Output impedance of 10000 ohms and a frequency response from 150 to 10000 Hz. Supplied with a desk stand, wired for two-channel output, and two swivel-type microphone holders which can be angled to provide the separation required for stereophonic recording. These versatile microphones can be removed from the stand and used as hand-held units. In addition to the desk stand and twin cables, the HK-102 microphones are also supplied with two lanyards and two slip-on desk stands. The HK-102 microphones have a die-cast metal case with an attractive black- and satin-chrome finish.

Features a unique, attractive design which incorporates two unidirectional microphones in a single die-cast metal housing having a satin-chrome finish. Supplied with a gray metal desk stand, and ten feet of two-conductor, shielded, ivory cable.

HK-104 ..... **$45.00***

DYNAMIC — HK-113

A very small, omnidirectional, 10000 ohm microphone, the HK-113 is especially useful in service counter, voice recording, public address and paging applications. The small flexible goose-neck base fits a standard microphone stand, and the push-to-talk/lock switch can also be used for remote control. Because of its high-style and unobtrusive appearance, the HK-113 is particularly well suited in public places where sound re-enforcement is needed.

BUD Series 2000 Upright Cabinet Racks

Series 2000 has emerged as the creative industrial designer's (Leon Gordon Miller, F.I.D.S.A.) conception of what image the modern electronic enclosure should convey to enhance the prestige of the contents. It combines the dramatic appearance of sheer, square lines with rugged construction. Together with its unique facade, it offers many exclusive features and economies inherent in all Bud products.

One of the time and cost saving benefits of the Series 2000 Cabinet Racks is the fact that they are shipped completely assembled and immediately available for use upon removal from the protective carton.

The basic frame is all-welded construction employing 14 gauge steel members. 18 gauge steel is used in the door, sides and top. "U" braces welded to the sides of the frame augment its strength and rigidity and act as the mounting for the vertical rails, which may be horizontally adjusted. Front panel mounting rails are tapped 10-32. Rear rails are pierced 9-32. Caster bracket in base is drilled for Bud RC-7758 casters.

All series two thousand enclosures may be quickly combined with each other laterally to create units of any desired width as shown in the Add-A-Rack series. In addition a number of Series 60 accessories are easily installed.

Standard finishes are Royal Blue or Gray textured enamel with clear anodized aluminum cowl and Gold textured enamel with gold anodized aluminum cowl. When ordering please add the following suffix to the catalog number: Gold **(GD)**; Royal Blue **(RB)**; Gray Textured **(GT)**.

White panels **(WH)** are recommended for use with Blue or Gray and Sand panels **(S)** with Gold cabinets.

Elements comprising each cabinet are specified above the adjoining tables.

All Cabinets accommodate standard 19" Panels. The Series below include Welded Framework, Plain Sides, Plain Rear Door and Solid Top.

BUD Series 2000 Inclined Panel Cabinet Racks

While all Series 2000 Cabinet Racks have the same styling and construction features, the Inclined Panel Models, in many instances, have different purposes than the Upright Models. Since the inclined panel is positioned 20 degrees off vertical, viewing the instruments by a seated person is more comfortable.

This model lends itself admirably to console arrangement, in a straight line in Add-A-Rack fashion.

Like the Upright Models, these cabinet racks are also shipped completely assembled, saving time and money.

An exclusive feature of the Series 2000 Inclined Panel Rack is that the panel mounting rails in the front vertical and the inclined panel section, as well as in the rear, are adjustable from front to rear. Caster brackets in the base are drilled to accept Bud RC-7758.

The standard finishes for these products are Royal Blue **(RB)** or Gray Textured **(GT)** Textured Enamel, with clear anodized aluminum cowl, and Gold Textured **(GD)**, with gold anodized aluminum cowl. White **(WH)** panels are recommended for use with Blue or Gray racks, and Sand **(S)** colored panels with Gold racks.

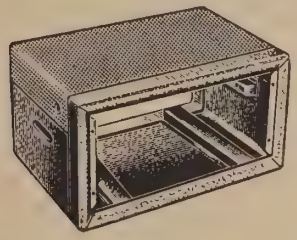
BUD Cabinets, Foundations

SHADOW CABINETS

An extremely versatile housing since both front and rear panels as well as the bottom may be removed for installation or servicing purposes. Unusually attractive appearance is created by recessing the front panel one inch as well as by beveling the front edges of the body.



The recessed front panel prevents accidental movement of controls, knobs, and switches attached to it.

The two piece body of the shadow cabinet is made of 18 gauge steel and the panels of 16 gauge steel. Finish is light gray hammertone. **HG**

Four rubber feet attached to the bottom of the cabinet eliminate marring of the surface on which it may be placed.

ECONOBOXES

For applications requiring a sturdier structure than a sheet metal utility cabinet, Bud now offers this line of die-cast aluminum boxes. The close fitting flanged lids are fastened to bosses in the body by means of screws. This feature together with the thickness of the aluminum alloy combine to provide excellent screening properties. The boxes, cast of LM-380 aluminum, are light in weight and easy to machine. These enclosures are suitable for a number of uses including instrument and meter cases, filter networks, junction boxes, switching, audio and radio frequency distributors plus many other purposes where a small box is called for. Especially desired for concealed or other interior use where safety closure is required.

BUD Slides

All BUD slides and Linear Motion Mechanisms are built from four basic components: the outer member, inner member, ball retainer and a number of ball bearings. These parts which are all steel, have been designed to enable us to fabricate an extensive variety of models. All models excel in their precision smooth, featherlight telescoping movement and are unsurpassed for their reliability and absence of wear after many hundreds of thousands of cycles.
Each main member is press formed to a constant and precise tolerance from high tensile cold rolled steel. Ball bearings of chrome carbon steel are set in special retainers which keep them evenly spaced to give an extremely smooth movement of the slide.

MATERIALS —Main members: high tensile cold rolled carbon steel. Ball retainers: cold rolled steel. Ball bearings: precision carbon steel. Mounting brackets, mounting plates, locks pivot wheels, etc.: mild steel.

FINISHES — Main members: Zinc and chromate. Ball retainers: Zinc. Ball bearings: Chromium plate. Mounting brackets, mounting plates, locks, pivot wheels, etc.: Zinc.

LUBRICANT — Special life-long lubricant specification DTD 825B (MIL. G. 23827) unless otherwise specified.

MOUNTING HOLES — All slide mounting holes are .180"x.210".

ASSEMBLY CARE — During assembly operations special care should be taken to prevent drill chippings and other foreign matter from entering the slide ball races. It is important that the slides are mounted parallel to each other and to chassis/drawer to achieve proper movement and fingertip ease of operation.

ADDITIONAL NOTES — Self-cleaning bridged ball retainer. Use only #8 pan or binding head screws for mounting. Long life, full ball bearing movement.

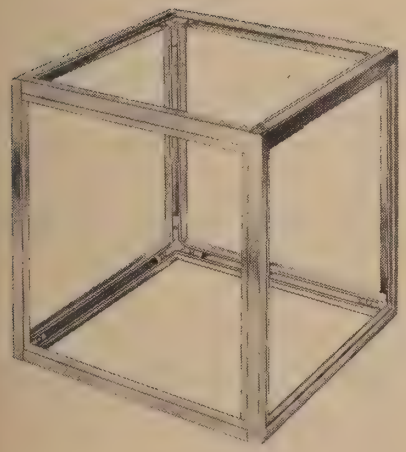
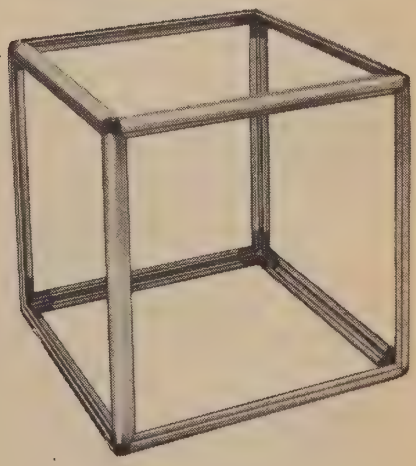
BUD Imlok System





THE BASIC ELEMENTS OF THE BUD *IMLOK* SYSTEM

901 BUD IMLOK SYSTEM

The BUD IMLOK SYSTEM comprises a large variety of aluminum corner connectors which interlock with extrusions to make metal housings easily, quickly and economically. It is ideal for research, prototype and short run work. With the simplest of hand tools, precision cases, boxes, cabinets and consoles may be made. Simple or complex designs are achieved by the proper combination of the elements of the system. Examples are illustrated on the following page. Enclosures are completed by attaching steel or aluminum sheet to the framework by any convenient fastening method.

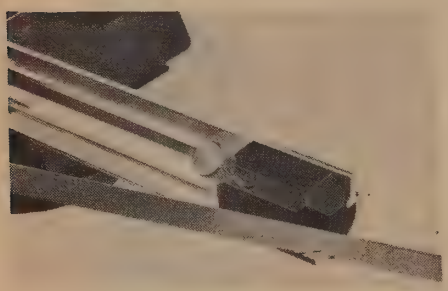
There are two different types of Imlok components and structures. The 901 Slimline components are more slender in appearance, and the corner connectors are completely covered by the extrusions in every completed structure. The Standard components are more rugged, and the ball surface of the connector is exposed. Ease of fabrication and assembly is common to both types.

Every Bud Imlok part is designed with an eye not only to its efficiency as an engineering component, but also to its appearance as a part of a completed housing. Special accessories such as hinges, catches, rubber feet and casters are available. Also a complete range of precision-made handles. Imlok components are available from authorized Bud Distributors in every major marketing area.

STANDARD BUD IMLOK SYSTEM

You may purchase BUD IMLOK in whichever stage of manufacture you prefer:

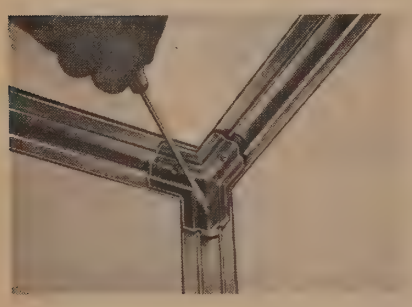
1. With connectors pre-drilled, ready for assembly with self-tapping screws and with extrusions.
2. With connectors pre-drilled, ready for assembly and with extrusions custom-cut by Bud to your lengths and mitered.
3. As a complete framework, ready for installation of your own panels.
4. As a complete housing with panels, but unpainted.
5. As a complete housing, fully finished.



If you have any queries relating to construction or design, please do not hesitate to contact our Imlok Advisory Service. Our extensive knowledge and experience is at your disposal — alternatively, we will always be pleased to arrange for one of our technical representatives to call on you to discuss any problems you may have.

BUD Imlok System

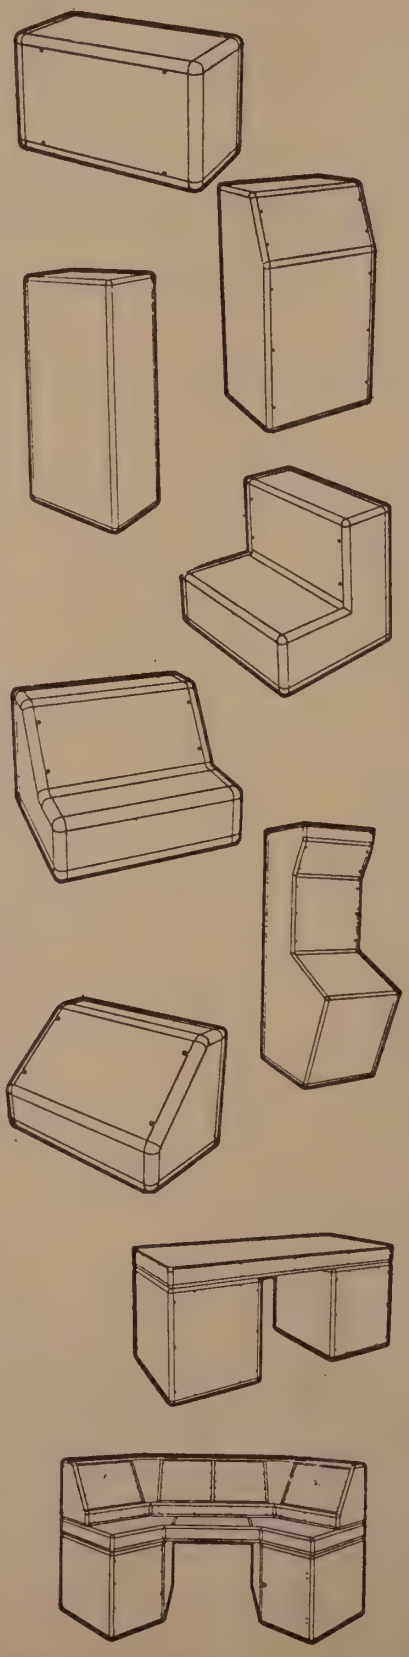
BUD IMLOK IS EASY TO USE



Cut the extrusion to length.

Mitre the ends of the flanges.
Special Imlok jigs make this easy.

Slide extrusion onto the connector.



Tighten the self-tapping screws until the point bites into the extrusion.

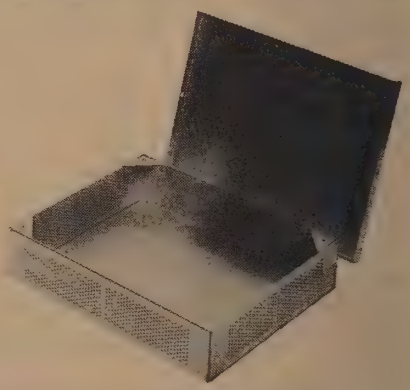
L M B® PRESENTS SOMETHING NEW IN CHASSIS —



THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

We make capacitors for guys who can't stand failures.

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING®Capacitors provide ultra-stable electrical performance.This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well-known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into standard CORNING Capacitors. The properties of these capacitors are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm on CYFR, CYFM and CYO units.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

	TYPE AND MIL SPEC	STYLE	CAPACITANCE RANGE (pf)	VOLTAGE	NOMINAL DIMENSIONS Size in inches	WEIGHT IN GRAMS
CYFM (CY)	Fusion-sealed environment-proof performance at cost savings. Electrically and environmentally interchangeable with CYFR. MIL-C-11272B. Parts marked either CYFM or CY. 	CYFM10 (CY10)	0.5 to 200 220 to 300	500 300	11/32 x 11/64 x 5/64	0.25 - 0.50

LEAD WIRE GAGE	#26	#26	#22	#22	#20	#20	#18	#18

Dipped mica leads may be tinned copper-clad steel, 30% minimum conductivity, or tinned brass except for DM-5 and DM-10 case sizes which are copper-clad steel only.

Crimped Leads

In addition to the straight lead design, DM capacitors (except DM-5) are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. Crimped leads are normally copper-clad steel. Lead wire gage for crimped lead units is the same as for straight lead capacitors for types DM-19 through DM-42. For type DM-10 #24 gage is used, types DM-15 and DM-16 use #20 gage. Crimped lead units are not regularly stocked but are available to special order at nominal extra charge.

Maximum Dimensions

Maximum dimensions of the various DM case sizes have been specified to anticipate variations in coat thickness and minor protrusions on the surface. Average dimensions of a given lot may be appreciably smaller than those listed.

Note that the leads are not centered in the thickness dimension. This can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/64 to 3/32 from one of the capacitor surfaces except for SCDM types.

Not all dimensions of every capacitance value are listed since size varies almost linearly with capacitance value. Dimensions of values between those specified below should be determined by interpolation.

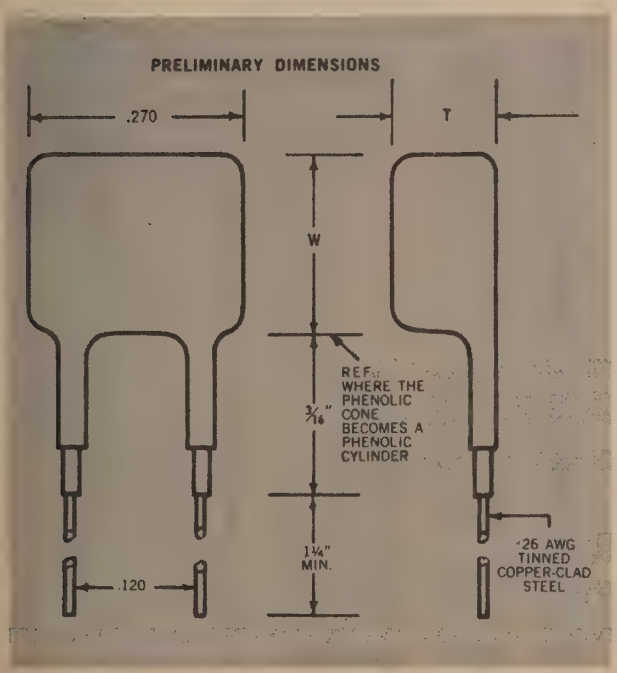
ELMENCO CAPACITORS



DM5 MINIATURE DIPPED MICA

Capacitance Range 1pF-390pF

The new ELMENCO DM5 dipped silvered mica capacitor has been designed to keep pace with the ever-shrinking world of electronic circuitry.

DM5 capacitors are supplied in standard voltage rating of 300 VDCW, 100V and 50V ratings as indicated in the tabulation below. Electrical and environmental specifications are basically the same as for the other ELMENCO dipped mica capacitor styles. The capacitors are stamped with working voltage and with capacitance value in pf. followed by a letter signifying capacitance tolerance. For example 27K would be 27 pF. ±10%, 150G would be 150 pF. ±2%.

ELMENCO CAPACITORS

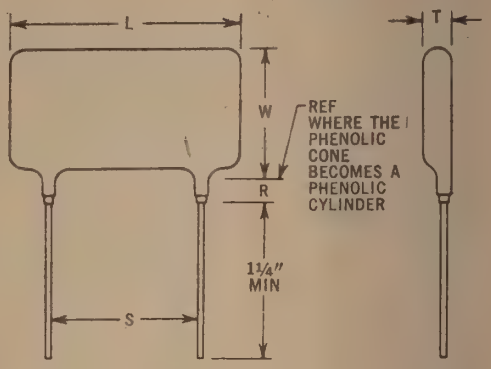
SPACE SAVER DIPPED MICA



UNIQUE, SINGLE DIP, SPACE SAVING CAPACITORS FOR ULTRA MINIATURE CIRCUITRY

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 2.3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions, they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

Representative dimensions of the SCDM style capacitors are given below. The dimensions of intermediate values may be closely approximated by interpolation.

Pricing for Types SCDM10, SCDM15 and SCDM19 will be found on Page 172.

ARCOLYTIC CAPACITORS

MINIATURE ALUMINUM ELECTROLYTICS

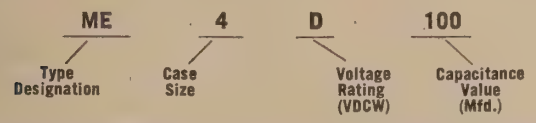
TYPE ME

Type ME Miniature Aluminum-cased Electrolytics use the same high purity (99.99%) etched aluminum foil as the standard size Arcolytics. The design of the Type ME is particularly adapted to the latest transistorized circuitry which features low voltages and compactness of structure.

Type ME capacitors have an all-welded construction which provides increased ruggedness and resistance to environmental extremes. Corrosion and electrolyte leakage are eliminated. Electrically, they exhibit extremely low leakage current and maintain extended shelf life without deterioration. All units are insulated with a transparent plastic sleeve permanently bonded to the aluminum body.

SPECIFICATIONS:

CAPACITANCE AND TOLERANCE:



Capacitance measurements are made at 120 cycles per second and 25°C. Capacitance tolerance is —10%, +100%.

OPERATING TEMPERATURE RANGE: —30 to 85°C.

D.C. LEAKAGE CURRENT: Maximum leakage current is 5 microamperes or .03VC, whichever is greater, where V is D.C. voltage applied and C is capacitance in microfarads.

LEADS: Axial 1½" length minimum, #20 tinned copper.

NOMENCLATURE: The part numbers for each Type ME incorporate case size, voltage, and capacitance value:

The example specifies a 100 mfd. 12V capacitor, case size ⅜" x ¾".

VOLTAGE RATINGS: The following table indicates letter designations assigned to the various voltages in which Type ME capacitors are supplied:

Letter Designation	A	B	D	E	G	J	M	N	R	T
VDCW	3	6	12	15	25	50	100	150	250	350

CASE SIZE: Type ME capacitors are made in 8 different case sizes.

CASE SIZE	DIMENSION	CASE SIZE	DIMENSION
1	3/16" D x 3/8" L	5	3/8" D x 7/8" L
2	1/4" D x 5/8" L	6	3/8" D x 1" L
3	3/8" D x 5/8" L	7	3/8" D x 1 1/8" L
4	3/8" D x 3/4" L	8	3/8" D x 1 3/8" L

The insulating plastic sleeve adds 1/32" x 1/16" to case dimensions.

STANDARD PACKAGING is in units of 5 in a custom-designed box which protects straight leads and shows quantity through a clear plastic window.

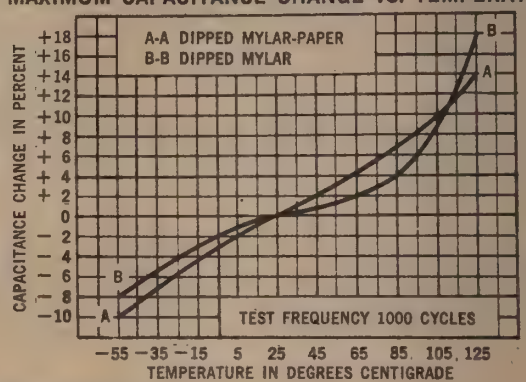
ELMENCO CAPACITORS

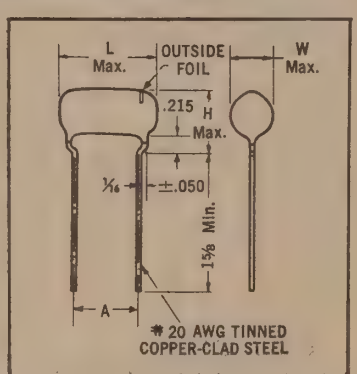
DIPPED TUBULARS

MYLAR* and MYLAR-PAPER



*Reg. DuPont Trademark

ELMENCO dipped mylar* and mylar-paper capacitors represent a double break-through in capacitor design. They combine missile and computer quality with commercial radio-TV cost. A recent development is the addition of precision dipped tubular capacitors in tolerances as low as ±1% in addition to the popular ±10% general purpose unit. The only difference between the general purpose "dp" series and the industrial precision capacitors lies in the extra stabilizing processes applied to close tolerance capacitors to insure retention of accuracy in the field under operating extremes. (See Elmenco-Arcolytic Industrial Catalog).



Elmenco Type DP capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages wellillustrate the inherent quality of these capacitors.

Note: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

ELMENCO CAPACITORS

VARIABLE COMPRESSION MICA

TRIMMERS

Elmenco trimming capacitors are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

Voltage 350 VDCT — 175 VDCW.

TYPE PC — PRINTED CIRCUIT TRIMMERS

The Elmenco trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until soldered. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trimmers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style. Prices available on request.

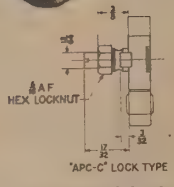
88 STANDARD TYPES OF VARIABLE AIR CAPACITORS



APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with ¼" diameter shafts to permit adjustment of the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 5/16" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

Miniature air variable capacitors

Type "U" capacitors

Sub-miniature Type "U" air variable capacitors cut costs, improve performance, and save valuable space in compact electronic equipment. Available in single section, differential and butterfly types, they occupy minimum mounting area. Single section type requires less than 0.2 square inch and differential and butterfly types less than 0.23 square-inch area for chassis or printed board mounting. Rotors and stators are precision machined from one piece of solid brass, providing outstanding mechanical stability and uniformity. Units offer high "Q" typically 2000 @ 150 MHz, high torque (2-1/2 to 10 ounce inches), exceptionally low temperature coefficient (plus 45 ± 15 PPM/°C), and absolute freedom from moisture entrapment. All metal parts silver-plated — ceramic is steatite, Grade L-423 or better. Exceptionally uniform delta C and voltage characteristics . . . breakdown ratings available to 1100 volts DC. No special tools required for installation — slotted end accommodates large screwdriver for quick adjustment. Choice of wide, double-pierced or printed circuit style terminals. Single-section models available in 2-Hole; Printed Circuit; and #10-32 Panel Mount types. Differential and Butterfly models available in Printed Circuit mounting. Specials available in production quantities with features including front shaft extensions and special platings.

METALLIZED MYLAR*
CHARACTERISTICS

Metallized MYLAR* satisfies the requirements of high resistance, low absorption, excellent retrace and capacitance stability over a wide temperature range and high ambient operating conditions. The self-healing characteristics are well known and extend the useful life of the capacitor. The second, and most overlooked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in extreme small size without sacrificing life, reliability and economy. Temperature range is minus 90°C to 125°C without voltage deviation. All units are extended foil construction.

TYPE AB
BATHTUB STYLE

Type AB CAPACITORS are hermetically sealed in bathtub containers and designed to operate under the most severe military environment and electrical conditions.

TYPE AZ
EPOXY COATED

Type AZ CAPACITORS are an economical version of the Type AM. These capacitors are not designed to withstand an extremely rugged environment, but they are suitable for most commercial applications.

Style W is tubular with axial leads.
Style X is tubular with radial leads.
Style Y is rectangular with axial leads.
Style Z is rectangular with radial leads.

HOW TO ORDER

Select the style required. Find style, voltage and capacitance in the table. Establish the part number by selecting the heading (i.e. AZ2-etc.) and adding the capacitance code and style letter. Make certain that capacitance tolerance is indicated as a separate item.

AZ2 is rated at 200 volts and AZ3 is rated at 300 volts operating.

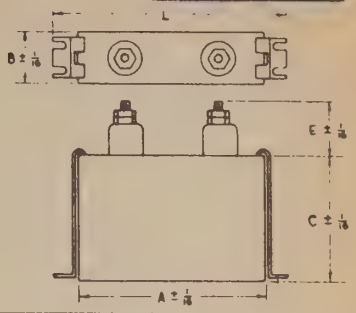
HIGH VOLTAGE FILTER CAPACITORS

SMALLEST SIZE AVAILABLE ANYWHERE



All glass containers with 'D' dimensions of 19/32 have 2-1/2 inch long 18 tinned copper pigtail leads.

CONTAINER is a hard glass pillar with silver fused to each end. A metal ferrule is soldered to each end assuring hermetic sealing. The stud is silver soldered to the ferrule. All parts are tin plated.

TYPE OF and **TYPE LK** capacitors are hermetically sealed, rated for operation at 85°C at full nameplate rating, and will withstand most environmental and electrical specifications in general use. Size is very small due to the nature of the dielectric used, and the particular attention to processing.

SPRAGUE CAPACITORS

TYPE 39D POWERLYTIC® ELECTROLYTIC CAPACITORS

Designed for applications which require the greatest possible capacitance in small physical case sizes.

- Type 39D capacitors supplement the original Type 36D Can-type Powerlytic line by offering high-capacitance units in axial-lead tubular configuration.
- Welds at all critical anode and cathode terminals eliminate riveted or pressure connections to assure freedom from open circuit even during operation in the microvolt or millivolt signal range.
- Improved molded phenolic end seals.
- Furnished with outer plastic insulating sleeve.
- Operating temperature range, −55 C to +85 C.
- These capacitors are provided with a pressure-sensitive safety vent.
- Low ESR, low leakage currents.
- For complete technical data, see latest issue of Sprague Engineering Bulletin 3415.

*Catalog numbers listed are for capacitors with outer plastic-film insulation. For bare case, change 13th character of cat. no. from "2" to "0" and subtract .078" from diameter and .125" from length. Capacitors listed have low-insert terminals. For high-insert or solder-lug terminals, change last character of cat. no. from "A" to "B" or "C", respectively.

SPRAGUE CAPACITORS

VITAMIN Q® SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

CERA-MITE® CERAMIC CAPACITORS, continued

TEMPERATURE-COMPENSATING AND NP0 TYPES

- Zero Temperature-coefficient Capacitors used Where Capacitance Change with Temperature is Undesirable
- Superior to Silvered-mica Types in Stability, High "Q", and Insulation Resistance
- Units listed below are discs
- Eliminate oscillator drift in TV, FM, VHF and AM receivers
- Negative Temperature Coefficient is 30 ppm/°C for N030 types, 80 ppm/°C for N080 types, 150 ppm/°C for N150 types, 220 ppm/°C for N220 types, 330 ppm/°C for N330 types, 470 ppm/°C for N470 types, 750 ppm/°C for N750 types, 1500 ppm/°C for N1500 types and 2200 ppm/°C for N2200 types.
- Standard Capacitance Tolerance of 12 pF and up; ±5%. On 10 pF and below: ±0.5 pF
- Rated at **500 WVDC**
- For Use in Tuned Circuits
- Temperature-compensating Types Have a Linear Negative Coefficient Curve
- Available in Standard 5% Decade Values in NPO and N030 thru N2200 Coefficients

CLEANING SOLVENT

"CAEON SOLVENT #27"

(Trichlorotrifluorethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

• NON-FLAMMABLE • VIRTUALLY NON-TOXIC • CHEMICALLY AND PHYSICALLY PURE • CHEMICALLY AND THERMALLY INERT • STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeon #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluable in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface 'Residue-Free'. All standard methods of using a solvent may be employed.

Write for Tech Facts.

Caeon Spray #27 also sold in aerosol spray container with extension tube.

VERSATILE CURRENT TEST ADAPTER TYPE Fig. 1

Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis. Vector Current Test Adapters have two spring test tube elements for each pin. These test tube elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position, merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position.

TUBE SOCKET TEST ADAPTERS — REGULAR Fig. 2

Similar to above adapters, except used to measure voltage and waveforms. Probe fits into tab holes which grip probe lead. High quality beryllium copper silver contacts and low loss mica filled phenolic shells. Adapters fit inside tube base shields and tube clamps.

TUBE SOCKET TEST ADAPTERS — SHIELDED TYPE Fig. 3

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling.

EXPERIMENTER'S AND MODIFICATION ADAPTERS Fig. 4

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections. Different plug and socket combinations available.

SOCKET EXTENDERS (NOT ILLUSTRATED)

SOCKET EXTENDERS provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins.

PIGGY-BACK PATCHCORD

Vector Fixed Panel style Patchboards provide simple but reliable low-cost units for multiple connection, single conductor patching for test panels, automation and telemetry equipment, low cost computers, numerical control equipment, paging and speaker systems or other equipment where economy and connection multiplicity are desired.

Extremely low contact resistance (less than .001 ohms) and long contact life (over 2000 insertions per contact without resistance change) assures reliability.

All boards are marked front and back with horizontal rows lettered alphabetically and vertical columns numbered. Brackets for mounting are supplied.

Holes for plugs are .093″ diameter, spaced on .265″ centers. Front panels are removable and may be changed if necessary. Larger contact systems can be made by mounting standard panels adjacent. Special sizes, special marking and screening in colors are made to order at minimum cost.

SPECIFICATIONS:

Panels: Black XXXP phenolic, Type PBE-P. Grade EXXXP per MIL-P 3115, .093″ thick with silkscreened white numbers and letters.

Contacts: Beryllium copper, nickel plated gold flashed, 2 holes for soldering on leads. Add letter "A" to Cat. No. if Wire-Wrap*tabs are desired.

Patchcords: Plugs .087″—.091″ diameter x .468″ long, nickel plated with standard #20 gage wire vinyl insulation. 6″ black, 9″ yellow, 15″ blue.

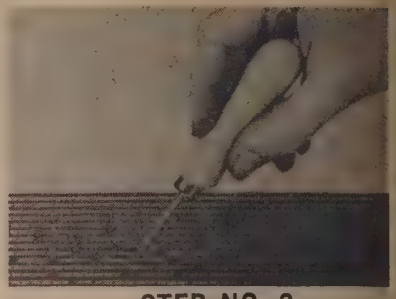
VEROBOARD* BK-6 KITS ETC.



STEP NO. 1

First stage is to lay out the circuit plan on a Vero Design Sheet — printed to represent the plain and copper sides of the appropriate Veroboard — allowing proper spacing for components and indicating where the copper strips are to be broken.

STEP NO. 2

Layout components on the back (plain) side of the Veroboard across the copper strips inserting leads into appropriate holes. You now have connected your components as required using the copper strips as your interconnectors. Leads may be soldered directly to the strips using a light, printed circuit type iron. Careful soldering will enable you to remove components and replace them if required.

STEP NO. 3

Break the circuit where required by breaking the copper strips with the Vero spotface cutter provided in your kit. The cutter is a precision, hardened steel tool which has a pilot pin that fits into any hole, and two cutting edges. Simply turn the cutter several times and the copper strip in the area of the chosen hole will be removed. Your circuit is now complete.

Non-magnetic brackets furnished with each choke.

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. They are used as filters in conjunction with two grounding capacitors of 0.1 microfarad capacity each. The Z-20 Choke is also used at radio receivers to keep out interference. All chokes consist of two, single-layer windings on a single ceramic core, insulated and protected by moisture-proof coating.

radio frequency plate chokes

This series of seven, single-layer-wound, solenoid type radio frequency plate chokes, covers the entire frequency range of 3 to 520 megacycles. The stock number corresponds to the approximate frequency at which maximum efficiency will be obtained, but the chokes may be used at any other frequencies within their operating ranges, as listed in the price table.

Chokes of the four highest frequencies are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects and also prevents breakdown from high r.f. potentials. Non-magnetic mounting brackets are furnished with the largest size, Z-7. The Z-14 and Z-28 have wire leads welded to lug type terminals; the Z-50, Z-144, Z-235 and Z-460 have axial-type wire leads.

Any one of these chokes may be selected for a particular frequency within its recommended operating range with the assurance that it will give excellent performance. Selection should be made, however, subject to the following qualification. It is generally advisable to select a choke with a resonant frequency (see chart) slightly higher than the desired operating frequency since any additional capacity to ground will tend to shift the resonant frequency closer to the operating frequency. Also, for this reason, the frequency designated by the catalog number of a choke is lower than its natural resonant frequency.

parasitic suppressor

The P-300 Suppressor is designed to prevent unwanted ultra-high-frequency parasitic oscillations which occur in the plate and grid leads of push-pull and parallel tube circuits. The P-300 is a non-inductive, 50 ohm, vitreous enameled resistor combined with a choke (in parallel) of .3 microhenries inductance and .003 ohms D.C. resistance. The two form a small integral unit only 1¾" long overall and 21/32" diameter. The unit may be mounted directly in the grid lead without extra support.

diode metersaver protects meters

Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters — for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

PHYSICAL CHARACTERISTICS

UTC's new MS series of high Q coils are only .23" high x .35" diameter. The low profile makes them ideal for high-density packaging requirements. All coils are molded in black epoxy.

Base diameter (.35") and lead spacing (.2") fall within TO-5 envelope dimensions.

Leads are .025" diameter gold-plated dumet, type D per MIL-STD-1276A, and are both weldable and solderable.

Q CHARACTERISTICS

Excellent Q in the 10 kHz to 50 kHz range, matching and often excelling the performance of much larger units. Designed for application over the wider range of 1 kHz to 100 kHz. See Q Response Curve.

MIL SPECS

All units have been designed, manufactured and successfully tested to complete MIL-27C environmental requirements. MIL Type TF5RX20ZZ.

TOLERANCE AND TEMPERATURE STABILITY

MS units have an inductance tolerance of ±2% at 0.1V RMS, 1 kHz, 0 DC, 25°C. All have excellent inductance stability with temperature: less than ±2% from −55°C to +105°C.

NEW "FE,* FI,* FO"* MINIATURE INDUCTORS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27C Specifications

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 kHz. The FO units are adjusted at 1 V, 400 Hz. All units are adjusted to a tolerance of ±1%. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from −55°C to +100°C. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

VARIDUCTORS

HVC & HVV (*VIC is not a MIL item) — **VIC**

These variable inductors are ideal for use in tuned circuits, equalizers, oscillators, etc. TYPE HVC:—Gives highest Q and stability; adjustable −70% to +200% of mean value. Hermetically sealed to MIL-T-27C.

HVV Types: For precise matching; vernier inductance variation ±10% of nominal value. Offer high Q over a wide frequency range and high temperature stability.

VIC:—Adjustable −45% to +85% of mean value.

Size: HVC, TVC and HVV types, 1 1/8" lg. x 25/32" w. x 1 7/32" h.; weight 2 oz. VIC type, 1 11/32" lg. x 1 1/4" w. x 1 3/16" h.; weight 5 1/2 oz.

TVC type inductors are identical to HVC units, but provide taps at 30% and 50% of total turns — ideal for oscillator circuits, etc.

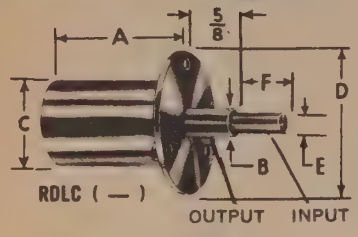
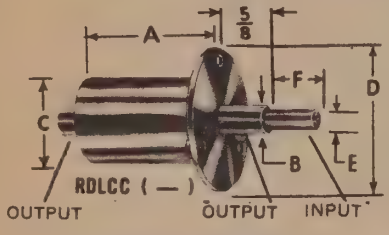
RATIO DRIVES



for FINE INSTRUMENT AND MACHINE CONTROLS



Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Type "RDL" provides "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear.

LIMIT STOP COMPONENTS

Designers can now consider the limit stop as a component to design with, such as potentiometers, capacitors, or other standard units. The simplicity of adjustment and the large number of available turns enables the stop range to be set with extreme precision. Conveniently located dual locking screws maintain settings under all conditions of shock and vibration.

Available for 1/4" and 3/16" shafts.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

new LIMITIMER

KEEPS EVERY PROGRAM EXACTLY ON SCHEDULE

Perfected during years of intensive trials in meetings, and conferences of all sizes, this compact, remote controlled timer known as **LIMITIMER**, has been acclaimed by chairmen, speakers and audiences alike.

* Particularly essential for events organized with two or more sessions carried out simultaneously, **LIMITIMER** assures that programs need never be curtailed because speakers talk too long.

* Each speaker is alerted automatically, gently, and with dignity, three minutes before his time is up, by remote control! Moderators are spared the embarrassment of interrupting speakers who are running overtime.

Resembling a miniature traffic light, **LIMITIMER** automatically triggers in sequence a Green "TALK", an Amber "3-MINUTE SUM—UP", and a Red "CLOSE" series of lights, to guide each speaker's alloted time. The control unit (placed at the moderator's position) connects to the speaker's signal light. Both audience and speaker have full view of the two-sided signal light.

JAN's Bezels enhance the appearance of the instruments on which they are used. These units are functionally designed to provide OPTIMUM UTILIZATION OF THE CRT SCREEN, as well as safety against tube breakage and danger to operating personnel.

JAN Bezel Assemblies are supplied with a bezel, calibrated graticule, (where applicable) light filter and CRT cushion. Bezels are finished in a smooth dull black non-reflecting surface. These units fit JAN Mu-Metal Shields.

Edge-lit Bezels (E.L.B.A.)** These Bezels are designed to provide edge lighting of the engraved scale-calibrated graticule by means of pilot lights.

Camera Mount Bezel These units provide an integral cast mounting flange that fits all standard 3", 5" and 7" CRT cameras.

JOLTA SHOCK TEST MACHINES For reproducible impact-shock test pulses

Four models engineered to reproduce the entire spectrum of all significant impact shock waves.

Designed for laboratory and production testing of light to medium weight components as well as complete instrumentation. Produced to meet practically all requirements of common Mil. Spec. qualification tests. Each JOLTA is electronically calibrated to certify compliance with test specifications.

JOLTA – Bench Model No. 1001 – Produced to meet JAN-S-44 & Mil-Std. 202 (202A). Standard model range-30-120G. Accessory plate springs available for test pulses to 500 G.

JOLTA – Bench Model No. M-500 – Produced to meet Mil-T-12679A (Sig. C) and Mil. T-19500A. Standard model range –200 to 1000 G at 1.0 millisecs. Alternate anvil and pad kits available to order.

JOLTA—Floor Model Nos. F-3003-C1, C2, C-3—Designed for high impact shock testing for small and moderate-sized components. Precision-machined magnesium casting utilized for higher shock amplitudes. Typical tests with these units 50 to 5000 G at .2 to 11.0 millisecs. For high impact testing, accessory springs and twin anvil combinations yield impulses of 0.2 millisecs to 5000 G.

Note: New design allows for quick changeovers of accessories.

For Production Testing, can be automated for continuous operation.

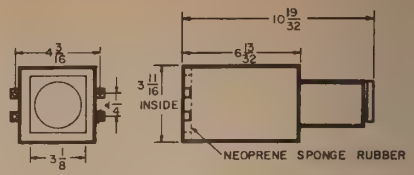
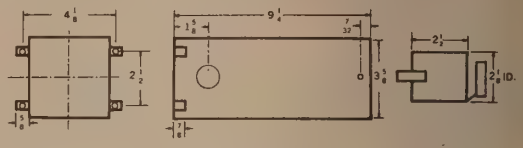
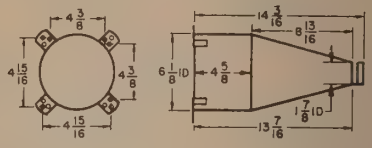
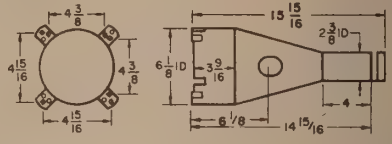
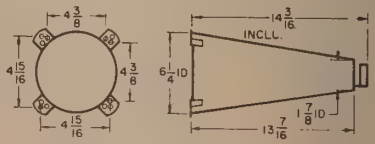
JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

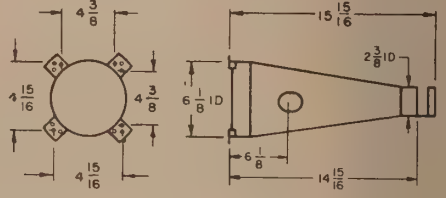


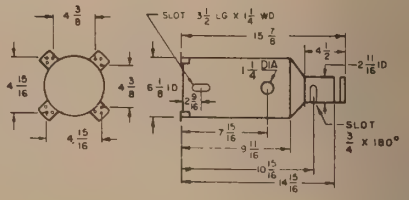












In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

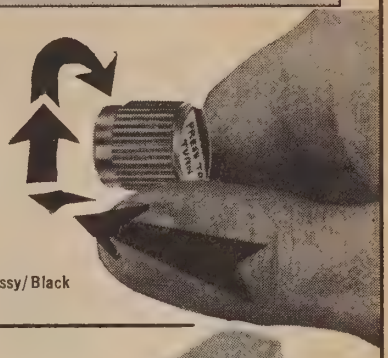
SAFETY KNOBS



"PRESS-TO-TURN" KNOBS

For Low Torque Applications

Knobs spin freely . . . and **MUST BE PRESSED-IN** while making changes. Developed specifically to prevent inadvertent changing of settings.

For basic dimensions, see our "De-luxe Instrument Knobs" (9, 12, 17 and 22 body diameter series).

When ordering, be sure to substitute prefix "T" for 9 Series and "Q" for 17 Series, as per typical part nos.

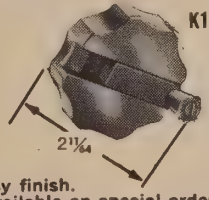
SLIP-CLUTCH KNOB With Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" Shafts)

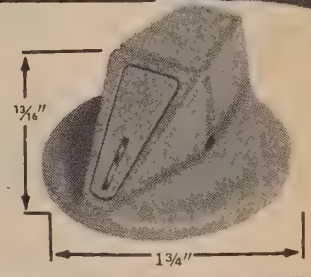


For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch"* automatically disengages and slips when the pre-determined torque has been exceeded. Knobs are fluted, and are equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

****Normally set for 3-6" lbs. Can be modified for other requirements.***

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

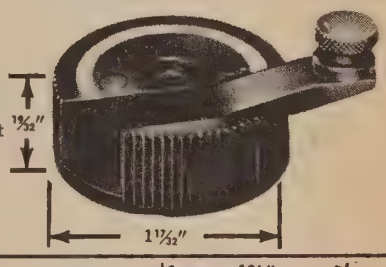
SPINNER KNOBS



With Fixed or Retractable Spinners | **Standard: glossy finish. (Matte finish available on special order).**

Cat. Nos. K-1275 & K-1276 (For ¼" shafts)

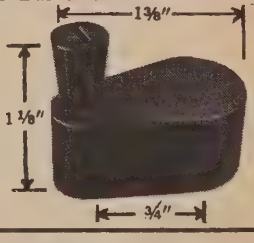
In appearance, these knobs are identical with No. K-1375 and No. K-1376 but without JAN'S Slip-Clutch mechanism. Made with single-unit, molded Bakelite-to-metal-insert construction, with two set screws for firm attachment to shafts.



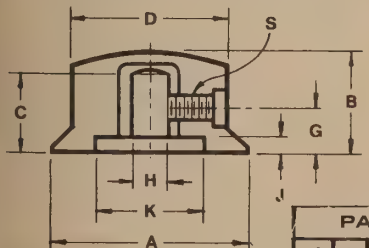
Cat. No. LM USED ON LUNAR MODULES!

Precision aluminum casting. Adaptable for back lighting. With slip clutch features similar to K1375 (at left).

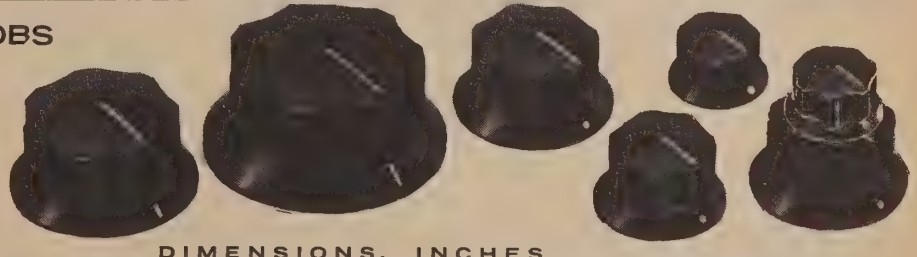
Cat. No. MS 91522-1 CRANK KNOB Retractable Spinner.



Aluminum Olive Drab. For ¼" shaft. Other colors and shaft diameters on request. 2⅝" minimum clearance required with handle in open position.



Cat. No. K 1125 SPINNER KNOB



For limited space applications.

For ¼" shaft. Other shaft diameters on request.

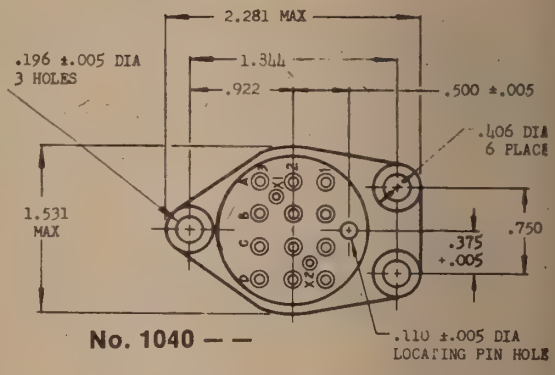
RELAY SOCKETS with Fixed or Removable Contacts!



Jan's relay sockets are specifically designed for use with plug-in relays . . . in electronic circuit applications which demand quick and easy assembly and maintenance.
Available with dip-solder pin terminals for printed circuit assembly, or solder cup and turret terminals for direct wiring. For applications requiring removable contacts, solderless wire crimp terminations are available for #16, 20, 22, or 24 AWG wire sizes.
A variety of mounting styles are offered including . . . tapped inserts with studs for top chassis mounting; thru hole; or tapped inserts with removable standoffs and screws for mounting on either side of chassis or panel. Unexpected disconnect because of vibration is eliminated by fastening the relay to the socket. Polarization dots and/or index holes (optional) aid in plugging in relay correctly. Socket contact material is spring tempered phosphor bronze gold plate over silver plate. Body material is Diallyl Phthalate, fiberglass filled per MIL-M-19833.

To meet customer requirements for low cost terminations, Amphenol introduces miniature sockets for PC board mounting and Wire Wrap termination. These sockets can be used for vacuum tubes, relays, input or output cable connections and many other circuit requirements where standard size sockets won't fit. Performance is equal to larger sockets; general purpose or mica-filled dielectric available. Wire-wrap termination type mounts in ⅝" diameter round or D shaped panel cut out; friction-type retainer ring included. PC board types mount through 1/16" diameter holes in PC board arranged in proper pin circle diameter as shown (view "A").

Contact shoulders prevent socket from bottoming, allow clearance for air circulation and cleaning.

Standard with leading manufacturers for many years. Widely used also on amplifiers, transmitters, phono-electric devices, home recorders, PA speakers, headphones, theft alarms and coin operated devices.

Unbreakable shielded cable type connectors of chrome plated, machined brass. The threaded ends engage with the coupling rings to make a positive, noise-free, leak-proof connection by pressing the center contacts firmly together. Spring cord protectors accommodate cables up to ¼" diameter. Receptacles mount in .385" holes when grounding to chassis; mount in .500" holes for ungrounded two-circuit applications. Can be screwed into housing or stand with standard ⅜"-24 tapped hole.

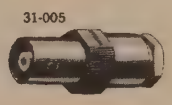
BNC - Bayonet Coupled
Popular and Lightweight

Your choice of six different styles: Regular, Improved with Captivated Contacts and Improved in addition to the three "Crimp" versions described below.

MIL-Crimp BNC's are recommended as the optimum BNC, giving optimum operating performance at low installed cost. Using standard crimping tools, these units can be assembled in a fraction of the time usually required for braid-clamp type connectors by eliminating critical assembly and soldering operations and reducing the parts to handle. Captivated center contacts prevent circuit discontinuity under environmental or mechanical stress. MIL-Crimps are weatherproof; their constant 50-ohm impedance provides excellent performance through X-band frequencies.



Quick-Crimp: gold-plated semi-captivated contacts, classed as weather proof. Heat shrink tubing for severe environmental conditions.

Original-Crimp: gold-plated contacts, classed as weatherproof. Each has a silicone rubber boot. For a complete listing of all BNC Connectors to the latest revision of MIL-C-39012/A, refer to your distributor or Amphenol.

ASTROplate®
Finish Available

Amphenol's exclusive, non-tarnish finish is available from stock on most popular rf connectors. **(See part numbers marked with ‡; others available on special order.)** ASTROplate® is corrosion and abrasion resistant. Mates safely with silver; is equally solderable. **To order: add suffix 1050 to part number.**

TNC RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

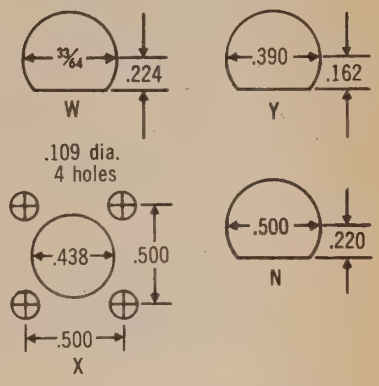
Threaded Coupling RF Connectors — TNC

TNC's were developed by Amphenol for aircraft, missile and other applications in which extreme vibration may be encountered. The TNC threaded coupling mechanism eliminates "rock" under vibration — a characteristic of bayonet coupled connectors such as BNC that introduces noise into the system and causes erratic performance. Other than coupling, TNC's are dimentionally and electrically similar to BNC, and have a constant impedance of 50 ohms.

Their rugged mechanical construction makes them an excellent choice for applications requiring a high degree of vibration.

ASTROplate® Finish Available

Amphenol's exclusive, non-tarnish finish is available from stock on most popular rf connectors. **(See part numbers marked with ‡; others available on special order.)** ASTROplate® is corrosion and abrasion resistant. Mates safely with silver; is equally solderable. **To order: add suffix 1050 to part number.**



CHARACTERISTICS

MECHANICAL: Mating: 7/16-28 thread coupling.

ALL OTHERS: Similar to BNC

UHF RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series UHF

Series UHF are low-cost, general purpose connectors for use in a wide variety of lower frequency applications (up to 300 mc) where constant impedance is not necessarily required. Available in small and large body sizes, they have a peak voltage rating of 500 volts.

While most UHF connectors have conventional solder-type cable affixment, Quick-Crimp UHF feature Amphenol's patented hex crimp design which permits faster, easier and more reliable assembly.

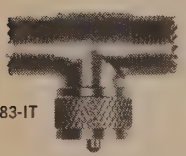
The 83-850 and 83-851 plugs eliminate one or both of two common soldering operations in assembly. The 83-850 has completely solderless braid and contact assembly; the 83-851 has solderless braid assembly.

CHARACTERISTICS

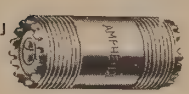
ELECTRICAL: Impedance: non-constant. **Frequency range:** 0-300 MHz. **Voltage rating:** 500v. peak.

ENVIRONMENTAL: Thermal limits: Teflon: —67°F to 390°F; Rexolite and polystyrene: —67°F to 185°F; mica-filled Bakelite: —67°F to 300°F. **Non-weatherproof,** except as noted.

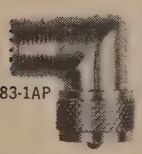
MECHANICAL: Mating: 5/8-24 thrd. coupling (small body), 1-20 thrd. coupling (large body). **Cable affixment:** braid solder, Quick Crimp or Solderless.



MATERIAL: Contacts: male: brass; female: beryllium copper. **Bodies:** die cast zinc or brass. **Plating:** .0002" silver min. **Insulators:** Teflon, Rexolite, polystyrene or mica-filled Bakelite.



OTHER DATA: small and large body types do not intermate. UHF connectors ordered will be small size body unless large is specified.



ASTROplate® Finish Available

Amphenol's exclusive, new non-tarnish finish is available from Distributor stock on all of our most popular rf connectors. **(See part numbers marked with ‡; other numbers are available on special order).** ASTROplate® is corrosion, heat and abrasion resistant. Mates with silver without danger of galvanic reaction; has equal solderability to silver's. **To order: add suffix 1050 to part numbers indicated below.**

SERIES "C" RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series C

Constant 50-ohm impedance C series connectors are design-matched to 50-ohm cables. They may be used with 75-ohm cable, at lower frequencies (below 300 MHz) where the connector introduces no serious mismatch. Standard connectors have a peak voltage rating of 1500 volts and provide low SWR up to 10 GHz; 4000-volt units are also available with good performance up to 2 GHz. The improved cable clamp provides excellent cable grip and weatherproof seal with a minimum of cable indentation; it utilizes a "V" groove split silicone rubber gasket and peaked braid clam. Accessory Clamping Adapter Kits are available for metal jacketed cables (AK). For armored cables, see armor clamp (AC).

ASTROplate® finish available, add -1050 to part number.

CHARACTERISTICS

ELECTRICAL: Impedance: 50 ohm constant. **Frequency Range:** 0-10 GHz, 1,500 volt type; 0-2 GHx, 4,000 volt type. **Voltage Rating:** 1,500 volts peak—standard; 4,000 volts peak as noted. **Dielectric Withstanding Voltage:** 3,000 volts RMS, 1,500 volt type; 6,000 volts RMS, 4,000 volt type. **SWR:** 1.25.

ENVIRONMENTAL: Thermal Limits: —67° to 390°F (—55° to 199°C). **Weatherproof:** except as noted, all C Series connectors are Weatherproof. **Hermetic Seals:** pass helium leak test of 2x10-8 cc/sec. **Pressurized:** compression seal.

MECHANICAL: Mating: 2-stud bay net lock. **Cable Affixment:** Improved: screw-thread nut and braid clamp.

MATERIAL: Contacts: male: brass; female and outer: beryllium copper. **Other Metal Parts:** brass. **Plating:** .0002" silver min. **Insulators:** Teflon, glass-Teflon (herm. sealed). **Weatherproof Gaskets:** silicone rubber.

MILITARY SPECIFICATIONS: Meet applicable sections of MIL-C-3989.

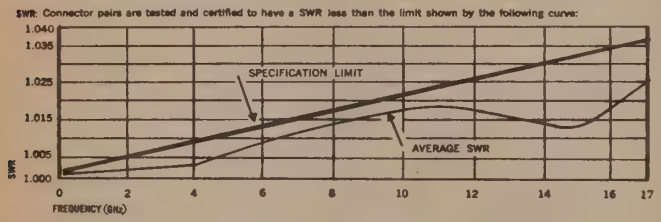
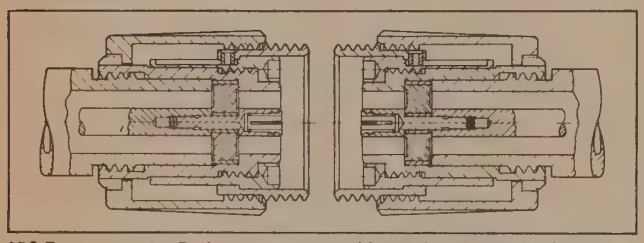
PRECISION RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series 131 Precision 7mm Connectors TWO DISTINCTLY DIFFERENT LINES

— APC-7 with sexless coupling





APC-7. Precision 50-ohm connector for use with 7mm (inner diameter of outer conductor) rigid air line and semi-rigid (ALJAK) coaxial cable.

Sexless coupling permits interconnection of any two APC-7's. Identical plane of electrical and mechanical contact permits accurate determination of the electrical length of a mated pair or of an air line assembly with a connector at each end. All components held captive.

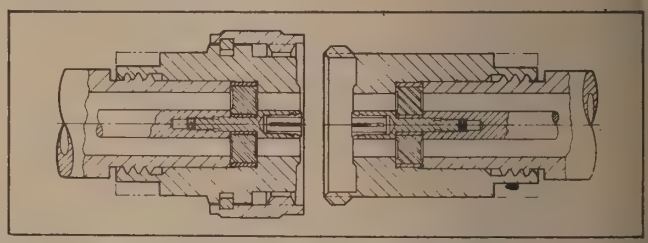
Connectors packaged in pairs in protective wooden box; assembly instructions and certified SWR test report included with each pair.

Specially designed for microwave and precision test equipment — Component manufacturers now using APC-7 fittings include: Alford, Alfred, EG&G, Hewlett-Packard, Maury Microwave, Microlab/FXR, Narda, PRD, Rantec, and Weinschel Engineering.

APC-7 components. Both connectors are identical and completely sexless.

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair): **Impedance:** 50 ohm ±0.1 ohms. **Frequency Range:** 0-18 GHz. **SWR:** 1.039 max. to 18 GHz. **Insertion loss (in db):** $< 7 \times 10^{-3} \sqrt{\text{Freq. GHz}}$ (example: 0.028 db at 16.0 GHz). **RF Leakage:** < signal inside coaxial line by ratio > 120 db▲. **Electrical length:** 0.723 ±0.001 inches (1.836 ±.00254 cm). **Contact Resistance:** inner: < 1.0 milliohm, outer: < 0.1 milliohm.



▲ RF leakage: Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

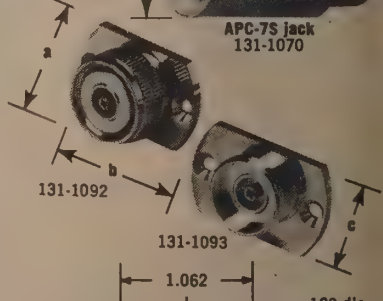
— APC-7S Economy Family WITH JACK AND PLUG COUPLING



APC-7S, the newest addition to Amphenol's expanding precision connector family was created to meet the need for an economical but equally reliable precision connector. Except for the coupling mechanism all other characteristics are identical to APC-7. Performance is equal, yet APC-7S costs almost two-thirds less than the original precision 7mm connector.

CHARACTERISTICS (Same as APC-7) except:)

MECHANICAL: Mating: 7/16-24 threaded coupling. APC-7S plus and jacks also mate with APC-7 connectors. **MATERIAL:** Same as APC-7 except: Coupling nut: nickel plated brass.

SMA's offer excellent mechanical and electrical performance from DC to 18 GHz — even after 100 mating cycles. "Thin wall" beryllium copper bodies (yield strength 3 times stainless steel) have an interface mating cross-section of 0.00452". Coupling nut torque can be twice that of other SMA designs.

SMA assembly is easier, most require only a simple, low-cost tool kit; "crimp" style uses standard BNC/TNC Crimper #227-350.

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series 27 — SUBMINAX with three types of low cost assembly

The original **quality** rf subminiature, **designed** for more critical electrical applications. These connectors are available in three types of cable affixment: **Radial Crimp,** a unique Amphenol low cost crimp design; **Quick Crimp,** a standard tex type crimp; and **Field Serviceable,** a design which is the easiest in the industry to assemble and contains the fewest parts. All have soldered centered contacts.

Two types of coupling mechanism. Specify push-on (snap-on) for frequent fast mating or screw-on for vibration type applications.

5116 SERIES SUBMINAX RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series 5116 — low cost QUICK CRIMP assembly

WITH TWO MATING STYLES — FULLY CAPTIVATED CONTACTS

Series 5116 combines good electrical performance with fast, economical cable assembly. Plugs and jacks, for example, have only four parts, including body assembly. Cable stripping is easier, with less critical dimensions. Ultra-reliable, gold-plated contacts are fully captivated, can be crimped or soldered. Extremely low cost of the crimping tool (Amphenol No. 227-911) makes field use of this connector series feasible.

Two types of coupling mechanism are available. Specify push-on (snap-on) for frequent fast mating, or screw-on for vibration-applications. Push-on will not mate with screw-on types; 50 ohm, 75 ohm and 95 ohm types mate only with like types.

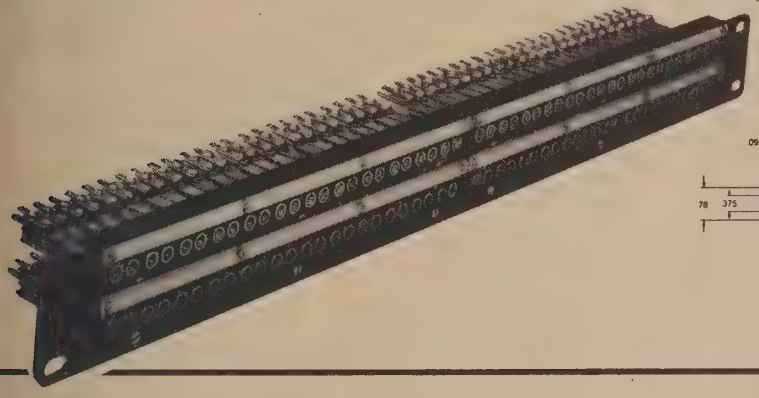
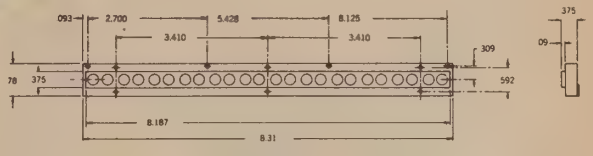
(ADC) Bantam jack panels

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks on a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.



specifications



1. **Panel:** Aluminum alloy, extruded. Finished black anodized per Mil-A-8625A. Overall dimensions 1¾"x19"—Standard EIA mounting centers.
2. **Jack Mounting:** Four moulded plastic inserts, each provides for 24 jacks. Pairs of jacks on 5/16 inch centers. Double-row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.
3. **Designation Strip:** Extruded clear plastic.
4. Panel assemblies are available with a wide variety of two and three-conductor jacks. See listing of Bantam jacks for complete details.

PJ-731	Double row panel, assembly less jacks, holds 96 jacks.
PJ-737	Double row panel, with 48 pair (96 total) PJ-818 jacks.
PJ-739	Double row panel, with 48 pair (96 total) PJ-839 jacks.
PJ-724	Panel inserts, less jacks, 24 holes.
PJ-700	Panel inserts, blank (same as PJ-724 without holes).
PJ-736*	Double row panel, with 104 PJ-818 jacks.
PJ-738*	Double row panel, with 104 PJ-839 jacks.

*Panels with 104 jacks (26 per insert, jacks all on 5/16 inch centers) are available on special order.

Custom panel assemblies with up to 104 jacks are available on special order.

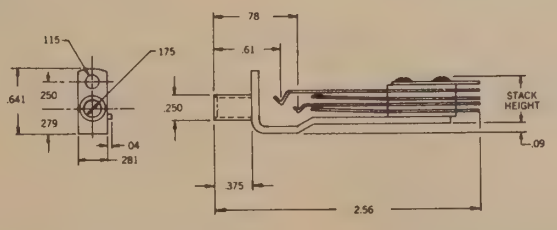
(ADC) Bantam jacks



Bantam Jacks will meet the electrical, mechanical and environmental requirements of the military specification for long frame telephone jacks. Although reduced in size these jacks will provide the same reliable service equal to that expected from regular size telephone jacks. These jacks are available in a variety of two and three conductor types, with isolated circuit contacts as well as normalling contacts.

CINCH

PRINTED CIRCUIT EDGE CONNECTORS

PRECISION MILITARY AND COMMERCIAL PRINTED CIRCUIT BOARD EDGE CONNECTORS

These Cinch printed circuit connectors are designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with a minimum of 30 micro-inches thickness gold plate. Units with solder tab or dip solder terminations utilize bifurcated contacts permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added conact reliability where vibration or printed circuit board irragularities would otherwise cause trouble. Types meeting Military Specification MIL-C-21097B are also available as indicated. These connectors have beryllium copper contacts with 50 micro-inches gold finish.

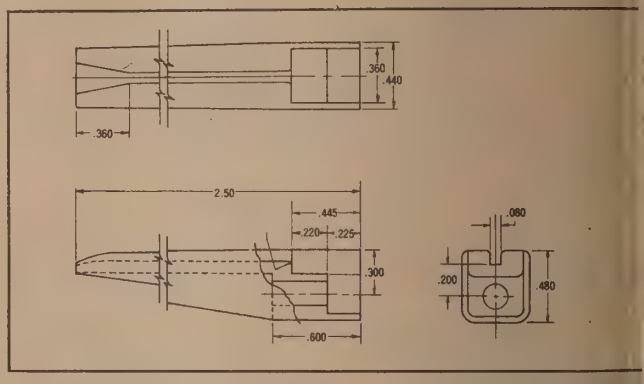
PRINTED CIRCUIT EDGE CONNECTORS (Cont'd)



PRECISION DOUBLE READ-OUT PRINTED CIRCUIT BOARD EDGE CONNECTORS WITH 0.100 INCH CENTERS

This new connector series features a unique bifurcated cantilever contact construction that provides a simple, dependable design capable of handling 1/16" thick printed circuit boards. These contacts are pre-loaded against an insulator stop to provide gap uniformity and assure rapid build-up of force to the PC board. This design combines minimum insertion force with maximum contact pressure.

Contacts are fabricated from grade A phosphor bronze, selectively gold plated with 30 micro-inches of gold over 50 micro-inches of nickel in the contacting area and 10 micro-inches minimum gold on the remainder of the contact, per MIL-G-45204, Type II. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14.

ECONOMY 22-POSITION DOUBLE READ-OUT PRINTED CIRCUIT BOARD EDGE CONNECTORS WITH 0.156" CENTER WIRE WRAP* TERMINALS

Similar to the precision edge connectors described above, these feature cantilever contact construction, selectively gold plated for 30 micro-inches of gold over 50 micro-inches of nickel in the contracting area and 10 micro-inches minimum of gold on the balance at the contact. The insulator is precision fabricated from black colored general purpose impact phenolic.

The selective plating technique used on the contact provides the performance of a 30 micro-inch plating at a substantially reduced cost. These connectors are available in three contact tail lengths to accommodate one, two, or three levels of wire wrap.

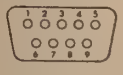
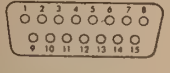
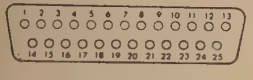
D-SUBMINIATURE CONNECTORS†

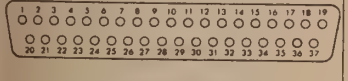
The Cinch D Subminiature Connectors are designed for applications where space and weight are prime considerations. These high contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although designed essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of accessory junction shells with integral clamps.

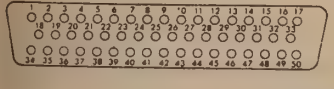
In addition to the original D series with two-piece insulators, Cinch offers Golden D and MARK III ROYAL D connectors utilizing monobloc insulators. The Golden D connector is available with either crimp-type, snap-in, removable contacts or standard solder pot contacts. MARK III ROYAL D connectors have the "Little Caesar" rear release contact assembly. Contacts are inserted by hand and extracted at the rear of the connector with a simple plastic tool. The "Little Caesar" contact assembly was selected by the National Aerospace Standards Committee for vital programs demanding great operational reliability.











All D Subminiature connectors will inter-mate if insert arrangements correspond. These connectors are designed to meet or exceed most of the requirements of MIL-C-8384 Rev. B.

Combination layouts are supplied with unfilled coaxial and/or HV contact cavities. Coaxial and HV contacts must be ordered separately, and may be used interchangeably in any of the layouts listed. HV contacts accommodate wire sizes up to #20. Coaxial contacts (with crimp or solder type terminations) and HV contacts are snap-in and removable. Solder type coaxial and HV contacts have captivated center contacts.

Royal D, Mark III and Golden D, Mark II contacts use crimp tool MS-3191-1. Extraction tool 599-11-11-150 is used with each Royal D, Mark III commercial connectors; insertion-extraction tool 599-11-11-165 is used with each military connector.
For detailed test data and technical information see Cinch Catalog CM-46.

Connectors Individually Packed in Heat-Sealed Containers to Assure Extended Shelf Life

To protect D-Subminiature connectors from contamination and other corrosive elements in the air, Cinch individually packs each connector in heat-sealed polyvinyl-chloride containers (as shown) with an inert gas, oxygen-free atmosphere. This assures every customer of extended shelf life. A separate compartment is also provided in each container for the loose crimp-type contacts supplied with the Golden D, Mark II and Mark III connector.

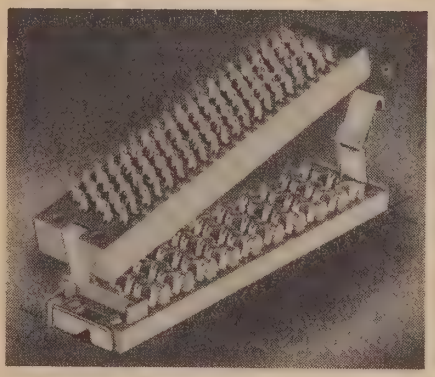
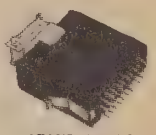
HINGE CONNECTORS AND ACCESSORIES



Cinch hinge connectors eliminate contact damage caused by high insertion and extraction forces.



Caps are available, furnished with liners and cable clamps. For more secure locking, an alternate lock with a hook fits into a cutout in the cap. If the alternate lock is required, order Part No. 37AL.

The castings are black phenolic, type CFG. Contacts are phosphor bronze, cadmium-plated (.0001). Caps are finished in black wrinkle and the cable clamps are nickel-plated. Liners are formed fibre.

P-302-CCT

S-302-AB

ELECTRICAL SPECIFICATIONS

All connector ratings are based on a continuously mated condition. "Rated Voltage" is ⅓ of Voltage Breakdown.

Rated Voltage ..... 730 Volts rms. Contact Resistance .... .016 Ohms max.

Under most normal operating conditions where not all contacts are carrying substantially full rated current, maximum current per contact is rated at 10 amperes. The Jones 300 series plugs and sockets are recognized under the Component Program of Underwriters' Laboratories, Inc. In accordance with UL Standard #498, the Underwriters' Laboratories ratings are derived from the condition whereby all contacts are carrying "rated" current simultaneously. The resultant ratings are as follows:

Rated Current	Rated Wattage
(2-12 contacts) ..... 7.5 amperes	(2-12 contacts) .....1875 watts
(15-33 contacts) ..... 4.5 amperes	(15-33 contacts) .....1125 watts

MECHANICAL SPECIFICATIONS

INSULATOR: Molded phenolic;; CONTACTS: Phosphor bronze, cadmium plated; HOUSING: Formed metal, black wrinkle finish.

400 series and 2400 series plugs and sockets are suitable for cap or panel mounting. Plug prongs are cadmium plated brass. Caps are finished in black wrinkle and equipped with a fibre lining. 400 series and 2400 series plugs and sockets are intermatable.
A special bracket, Type 46, is supplied for mounting the 2-contact angle bracket (AB) type socket to a panel or chassis.

Series 2400 plugs and sockets have recessed pockets with barriers around the contacts, both on the mating side and the solder connecting side. A shoulder extends around the face (mating) side of both plug and socket presenting a finished appearance when mounted in bracket or cap. Angle brackets can be ordered as specials for the 2400 Series.

SERIES 500

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. A top-mounted marker strip can be furnished as described on page 16.

BARRIER BLOCK ACCESSORIES (Cont'd.)

FANNING STRIPS

161 SERIES FANNING STRIP WITH CABLE CLAMP AND 141 SERIES BARRIER TERMINAL BLOCK

Fanning strips facilitate cable or harness wiring and minimize the possibility of subsequent wiring errors. Both straight and angle type fanning strips are available. Terminals are made of .032" brass, cadmium-plated. XP black phenolic mounts are 3/32" thick, 1/2" wide furnished with a hole, in either the right or left side, for securing the cable with lacing twine. A cable clamp as shown on page 16 is recommended for larger sizes.

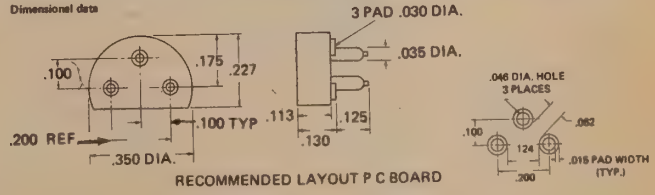
TO-5, or TO-18*, LOW PROFILE TRANSISTOR SOCKETS



Mount directly to the PC board with a snug fit to prevent bleeding of solder and flux to the opposite board surface. Chamfered socket holes minimize lead bending during insertion. Contact ends are formed and watertight, so that solder and fluxes cannot enter the barrelled contact to obstruct lead entry.

*Directly accept TO-5; accept TO-18 with full length or formed heads.

MATERIALS INSULATOR: 20% glass filled nylon in black, natural, or green; **CONTACTS:** beryllium copper with gold plating over copper base.

MECHANICAL SPECIFICATIONS MAXIMUM PIN DIAMETER: 0.019"; MAXIMUM PIN DEPTH: 0.200 ± 0.010", MAXIMUM INSERTION FORCE: 5 ounces; WITHDRAWAL FORCE: ¼ ounce at 3 and 100 cycles.

INTEGRATED CIRCUIT SOCKETS

Cinch IC sockets are ideal for testing and prototype purposes as well as production applications. Convenient and dependable, these sockets reduc the possibility of damage to leads and hermetic seals. Cinch IC sockets provide positive electrical contact and low contact resistance. They offe excellent resistance to corrosive atmosphere and to extremes in temperature and humidity.

PRECISION DIP SOCKETS — DIP SOLDER TAILS

Part No.	Contacts	Materials
14-DIP	14	GP Black Phenolic
16-DIP	16	Insulator with Electro-tin
24-DIP	24	Plated Leads
14-DIP-1	14	Diallyl Phthalate
16-DIP-1	16	Insulator with gold
24-DIP-1	24	Plated Leads

These sockets combine high contact retention with low contact resistance and high environmental stability. They accept standard 14, 16 and 24-pin dual-inline packages having round or flat leads. (Standard spacing is .300" between lead rows and .100" between lead centers.) Socket leads are on the same centers as the D.I.P. itself. This feature allows easy installation of the socket in PC boards designed for direct insertion of the D.I.P. Choose between diallyl phthalate insulators with gold plated beryllium copper contacts or GP black phenolic insulators with electro-tin plated beryllium copper contacts.
